

FINDINGS SUMMARY

I analyzed the ecommerce dataset, which shows that Chair and Printer were the top-performing products by total revenue.

The highest monthly revenue occurred on **June 2024**, reaching **N68,068.54** across **53 orders**, indicating limited customer retention in this sample. With these result suggestion, revenue is driven by high-value products and seasonal peaks rather than repeat purchases.

RECOMMENDATION

Run targeted promotions on Chairs and Printers to maximize revenue from your best-selling products.

Investigate why customer retention is low and introduce a loyalty program or follow-up offers to encourage repeat purchases, especially around peak months like June.
